OBI Cluster Diagram for new CIA Building

1. Attached is the cluster diagram of OBI which you requested for purposes of office location in the new CIA building.
2. With respect to the space requirements for OBI in terms of square feet, the space chart which was presented to the CIA Building Committee on 31 August 1955 remains unchanged. You will recall, however, that at the meeting of the Building Committee questions were raised with respect to the conference, vault, map file, and drafting rooms. The Building Committee decided that these should be surveyed, but thus far this has not been done.
3. The 320 sq. ft. - three-occupant room is best suited to the needs of the Editorial and Regional Divisions. Each editor requires a table in addition to his desk in order to check data on large maps and tabular material with the text. We now have this arrangement and it is very necessary and satisfactory.
4. With respect to the gadget item, an intercommunication system between headquarters and divisions will be necessary. Other than this I can think of no special requirements at this time.
